THE AIRDRI GROUP

HAND DRYER & SANITISER COMBINED

PureDRI

A new generation of washroom hygiene technology

- Continuously disinfects air & surfaces
- Economic jet dry hand dryer
- Reduces unpleasant odours
- Focused disinfection for users
- Exceptional energy efficiency

CONTINUOUS PROTECTION

BEST-IN-CLASS DISINFECTING TECHNOLOGY

This highly efficacious disinfecting system creates superoxide radicals and is proven to reduce airborne micro-organisms within minutes — and substantially reduce unpleasant odours in washroom environments.

PureDRI is a highly effective hybrid solution for high traffic washrooms / bathroom facilities.

THREE POINTS OF INFECTION CONTROL

Washroom disinfection — 24/7 protection, neutralising bacteria and viruses - and reducing mould in spaces up to 108 sq ft.

Efficient hand drying — a powerful jet-dry function run by an ultra-efficient 200-watt motor.

User protection — an additional blast of pure filtered air onto hands after drying.

TRIPLE ACTION DEFENSE

Designed to reduce risk at every stage

A continuous cycle of protection — the washroom is disinfected before a patron arrives, while they are present, and at the point of contact with their hands. PureDRI is working continuously.

STEP 1

A patron enters the washroom

PureDRI is actively reducing airborne and surface micro-organisms.

STEP 2

Pathogens are in the air and on surfaces

PureDRI is continuously reducing pathogens in the washroom. Results show that up to 74% of airborne particles are eliminated in less than 5 minutes.

STEP 3

Patrons wash hands, then use PureDRI

The jet speed dryer uses pure filtered air to dry hands thoroughly over a 20 second cycle.

STEP 4

Benefits of pure, filtered air

Scientific chamber testing shows that the extra blast of pure filtered air further reduces bacteria.
